## ANCHORING FREESTANDING GOALS

• All free-standing football, hockey and other sports goals (except Integral Weight Goals© and Fence Folding Goals) must be anchored whether in use or stored.

Options for anchoring freestanding goals in preferred order are:

1. The use Integrally Weighted Goals
2. Attachment of back bars to permanently FIXED anchorage points (Tarmac Type, Turf Anchors, Sports Hall Type Anchors & Flip-up Style Anchor Sockets
3. Attachments to surround fence by means of Fence Type Anchors
4. Attachment of adequate freestanding weights, i.e. Counterbalance Type

• Freestanding weights are an effective temporary method of stabilising goal posts, but care should be taken to ensure the correct amount of weight is used i.e.

• When other forms of anchors are to be used i.e. 'U' Pegs, Spira locks or Cork Screw Types, soil conditions play an important part as they may not hold adequately in certain ground conditions. Therefore these types of fixing should only be used where quantitative evidence exists of their effectiveness under the worst predictable ground conditions.

• Care should be taken to ensure the attachment of anchors does not create an additional hazard such as entrapment or trip.

from £85.10 each

Heavy Duty Turf Anchor (top)  
Turf Anchor (bottom)
